246 milder winters there seems to have been no such response. Although there has been hay-making on the rich meadows of Co. Meath, for example, since medieval times, when the English openfield system was introduced, I have found no literary or archaeological evidence for it anywhere in early Ireland. Indeed Giraldus Cambrensis expressed surprise in the [114] twelfth century that the Irish neither made hay nor built stalls for cattle, and despite his untrustworthiness I believe his witness may be accepted in this instance. Hay-making would have begun on the river bottoms (callows, holms) which, being liable to floods, were not available for winter grazing: this meadow hay is today much less important than 'upland' hay, the significant term used for rotation grass. The hay-making season is nowadays a time of toil for all members of the family, but I suspect that the period from midsummer to late July was under the old order a slack season, the time for raiding and fighting, and catching the English bending in the hayfields. For the Irish it was the 'blue month', when food was scarce (July is also called 'the hungry month') and the meal bins empty. In Ulster at any rate, for reasons which may be older than King William III, July is the holiday month and the time for faction fights. Sir John Myres used to say that in the Mediterranean world, where there is little grass to make hay, the month of May was the slackest time of the summer, the [721] favourite time for fighting instead of hay-making. In Ireland as in classical Greece the winter climate made it difficult and unsportsmanlike to go to war at that season.

To judge from present practice on the tiny farms of the west of Ireland, grass was cut as required from field-banks and odd [462] corners, a creelful at a time to give to the cow as a 'bribe' at milking time, and it was woman's work. The hook used for [412] this purpose, the grass or scythe hook, is smooth-edged, unlike the saw-toothed corn sickle, and what hay was made in former times was probably cut for the most part with the hook. The [231] livestock would be fed in winter mainly on oatstraw, and grazed on the infield stubble, supplemented by the outfield grasses which had been allowed to mature while the bulk of the stock was at the summer booley-grounds. We may be sure that what little hay was saved was treated much as it is on mountainy

778 on the island during the early part of the sixth century. A low wall with two openings has been constructed about the spring, and it is visited frequently by those wishing to obtain water or to pray. I was told by the owners of surrounding fields that when they were children many gallery grave tombs stood in the area, but most of these were removed when the fields first were improved and seeded. Most islanders will not molest prehistoric and medieval monuments, especially those that they believe are burial places, out of reverence for the dead or fear of the ghosts or fairies who reside within them; but down the centuries, such structures gradually have disappeared by being torn down to satisfy building and farming needs. It is the emphatic claim of the folk that the sacred well was created miraculously by the visiting saint and has never dried up, but two unbiased observers reported to me that they had seen it waterless during especially dry summers.

721 At least twice during the Middle Ages Inis Beag was laid waste by invading forces: first by Vikings in 1081 (and maybe on other occasions between the ninth and eleventh centuries, when much of Ireland came under the control of Norwegians and Danes), and then in 1334 by Sir John Darcy, the Lord Justice of Ireland, who with a large fleet and army sailed around the Irish coast implementing British rule. The islanders believe that Inis Beag was completely depopulated by the Vikings and possibly by the Darcy expedition, and again by wars once, and maybe twice, during the sixteenth and seventeenth centuries.
